Major Source of Income¹

SUMMARY

Of every 10 farms in the United States four had one of the following as their major source of income—(1) field crops, (2) vegetables, (3) fruits and nuts, (4) horticultural specialties, or (5) forest products.

Approximately one out of every four reported its major source of income as one of the following livestock or live-stock products groups—(1) the sale of livestock, (2) dairy products, (3) poultry and poultry products, or (4) other live-stock products.

For one out of every three farm operators the value of the products used by the farm household was greater than the value of products from any of the other nine sources of income.

In the value groups below \$600, farms with products used by the farm household as the major source of income included a greater proportion of all farms than any other single major-source group. Field crops as the major source of income took the lead in the \$600 to \$9,999 value-of-products groups, whereas the proportion of farms reporting the sale of livestock as the major source was greatest in the \$10,000 and over value group. The number of livestock farms in the \$100,000 and over value group was more than two and one-half times as great as the number of field crop farms, the second largest number.

Data on 2 major sources of income for farms with \$10,000 and over value of products are shown by States in table 4. These 2 major-source groups are—(1) livestock and live-stock products and (2) crops and forest products, including 13 farms with products used by the farm household as the major source of income. Of the farms in the \$10,000 and over value group in Wyoming, Nevada, and Utah more than nine-tenths reported the sale of livestock or live-stock products as their major source of income, whereas less than one-fifth of the farms in Louisiana and Arkansas were in comparable groupings. The proportion of farms reporting crops and forest products as the major source of income in the various States ranged from 8 percent in Wyoming and Nevada to 81 percent in Arkansas.

DEFINITIONS AND EXPLANATIONS

This classification of farms by major source of income was as objective as possible. Of the 10 groups of products listed, the 1 that supplied the largest value of products, regardless of the percentage which its value was of the total value of products, was regarded as the major source of income. If the entries for 2 or more of the 10 value-of-products groups were exactly the same, the farm was classified according to the item predominating as the major source of income in the locality.

It was possible, however, for a sheep ranch to be classified with "livestock" as the major source of income or with "other live-stock products" as the major source of income, depending upon the comparative gross receipts from the sale of sheep and from the sale of wool on the ranch in 1939. Similarly, a farm

with a single crop or a single type of livestock and with garden, poultry, and live-stock products used for home consumption would be classed as a "subsistence farm" if the value of products used by the household exceeded the value of the crop or live-stock sold or traded. This situation might be found on a crop farm with a total or part crop failure, or where the crop was not sold or being held for sale, but was consumed on the farm. The small income from live-stock might have been caused by the loss of animals through accident, disease, etc.; the retention of the live-stock as part of the farm flock or herd; or the sale of the live-stock late in 1938 or in the early months of 1940 instead of in 1939. Again the value of products received from crops and live-stock or live-stock products might be so diverse that the value of products used by the farm household would exceed the value from any one of the other nine value groups into which the income was classified. This kind of farm also would be classified as a "subsistence farm."

A classification of farms by major source of income, such as the one reported here, also differs in several other important respects from a classification by type of farm. All specialized dairy farms where the value of dairy products exceeded the sale of live-stock in 1939, for instance, would be classified with dairy products as the major source of income, but so might the farm of a retired farmer living on a 3-acre tract at the edge of a small village and selling milk from two cows to neighbors. The fact that this small farm was not recognized as a dairy farm would not prevent it from being classified with dairy products as the major source of income. Confusion will be avoided, therefore, if it is remembered that these farms are more accurately described as "farms with dairy products sold or traded as the major source of income in 1939" rather than "dairy farms." Similar qualifications apply to all of the other major-source classifications.²

The proportion of farms in each value group with the sale of live-stock, "other live-stock products," fruits and nuts, and horticultural specialties as the major source increased with an increase in the value of products. The same increase in the proportion of farms in each value group was noted for dairy farms up to about \$2,000 value of products; above that amount the proportion in each value group decreased. The increase in the proportion of poultry farms in each value group was not so marked as it was for the live-stock and dairy farms, but with the exception of a decrease in the \$1,500 to \$2,499 value groups, a slight increase in the percentage in each value group was noted in all other value groups.

With minor variations, farms with vegetables as the major source of income were relatively more prevalent in the upper-value groups. Farms with field crops as the major source of income were more frequently found in the middle-value groups than in either the extremely low or the extremely high-value groups.

Farms for which the value of products sold, traded, or used by the farm household was the major source of income were

¹All figures for farms with \$10,000 and over total gross value of products shown in this chapter are based upon a complete tabulation of the reports for individual farms. These figures for the \$10,000 and over value groups, therefore, are not comparable with those used in *Technical Release numbers A, B, C, and D*, which were based upon tabulations of data from a 2-percent sample.

²A more extended discussion of the 1940 Census classification of farms by major source of income and the differences between the 1930 and 1940 classifications can be found in ch. X, vol. III, General Report on Agriculture, 1940.

CENSUS OF AGRICULTURE: 1940

concentrated in the lower-value groups. Few farms with products valued at more than \$1,500 were included in this classification, although 8 percent of the farms in the \$1,000 to \$1,499 value group reported products used by the farm household as their major source of income. Some of these "subsistence farms" with a large value of products used by the farm households were rural residences or country estates which supply much of the food requirements of 2 or more families living on the farm. They might also be farms with diversified activities. A farm with \$4,000 gross value of products, for instance, might have farm products used by the household as the major source of income if the farm household used \$600 worth of products and the farm reported 6 other sources of income, none of which equaled \$600.

SALE OF LIVESTOCK AS MAJOR SOURCE

The sale of livestock was the major source of income for 726,162 farms and constituted two-thirds of the total value of their products in 1939. The value of the livestock sold or traded by this major-source group, 12 percent of all farms, was almost two and one-half times the total value of livestock sold or traded by all other farms. Some of these farms were feed lots or ranches which bought mature cattle and fed them out for the market. Many Corn Belt farms with the sale of livestock as the major source of income add their livestock enterprise to a crop-production program, providing feed for their livestock, quite as extensive as that of exclusive crop farms of comparable size. The practice of crediting the gross value of livestock sold to each farm, feed lot, or ranch selling the livestock, regardless of the length of time the livestock was on the farm or the amount of feed consumed by the animals, results in considerable duplication of gross income in the reported total value of livestock sold or traded. It also results in some farms, which otherwise would be included in some other major-source group, being classified in the group reporting the sale of livestock as the major source of income. This situation is particularly true for farms, feed lots, or ranches feeding livestock for the market, and for farms marketing their crops by feeding livestock, although the major portion of their time and effort was spent in producing crops. The large-scale operations and quick turnover obtained by livestock feeders result in a high-gross value of products for these farms and cause a large proportion of them to be classified in the higher-value groups. Livestock farms were infrequent in the value groups under \$400 and relatively infrequent in the value groups between \$400 and \$999. About one-fourth of the farms in the \$2,000 to \$5,999 value groups reported the sale of livestock as their major source of income. In the \$10,000 and over value group, livestock farms were 39 percent of all farms and more than one and one-half times as numerous as field crop farms, the next higher group. Livestock farms occupied this position of importance, however, in only 4 divisions—the West North Central, the Mountain, the East North Central, and the West South Central.

The West North Central States had 45 percent of all the farms in the United States reporting the sale of livestock as the major source of income; 30 percent of the farms in this division reported livestock as their major source of income. The East North Central States were second in number of livestock farms, though the proportion of farms in this major-source group was greater in the Mountain States. New England had the fewest farms with the sale of livestock as the major source of income.

More than one-fourth of the gross value of products from livestock farms in the \$10,000 and over value groups in the Pacific and the West South Central Divisions, 29 and 27 percent, respectively, was produced on farms with products valued at \$100,000 and over.

DAIRY PRODUCTS AS MAJOR SOURCE

Farms with dairy products as the major source of income in 1939 constituted 10 percent of the classified farms in the United States, yet they produced more than two-thirds of the dairy products sold or traded in 1939. The degree of their specialization was indicated by the fact that 63 percent of their total value of products came from dairy products.

The small dairy farm organization is well suited to areas of grass land and pasture where a family, doing its own work, may live fairly comfortably on the output of a few cows as the principal source of income. One-sixth of all dairy farms had a total value of products of less than \$600 in 1939. However, about three-fourths of the value of the products from farms with dairy as the major source of income was produced by medium-income farms in the \$1,000 to \$9,999 value groups.

Farms with dairy products as the major source of income were heavily concentrated in the East North Central, the New England, and the Middle Atlantic Divisions. Outside of this specialized area dairy farms were usually rather small or very large operating units. In the South Atlantic Division most of the operators producing these products had relatively large dairy establishments, with an average value of products of \$3,897; for farms with dairy products as the major source this division had a higher average value per farm than did any other division. Less than 1 in 5 such farms had products valued at less than \$1,000 in 1939.

The second highest average value of products per farm, \$3,075, was in the Pacific States. In the Pacific Division, however, the 43 dairy farms in the \$100,000 and over value group produced 16 percent of the total value of products reported by the \$10,000 and over value groups with dairy products as the major source of income. This was a larger percentage than was noted for any other division.

POULTRY AS MAJOR SOURCE

Less than 4 percent of the classified farms in the United States reported poultry as their major source of income; yet 17 percent of the output of poultry and eggs was produced on these 217,570 farms. Almost three-fourths of the total value of products on these farms came from poultry and poultry products.

Farms with poultry as the major source of income were ordinarily small units; 56 percent had less than \$1,000 value of products in 1939. Poultry can be handled by people of advanced age, by children, and by men and women not strong enough for much other farm work. By careful selection and arrangement of equipment, the necessary work for a small flock can be done after working hours by men working at other occupations.

Large specialized poultry farms were most frequently found in the New England, the Middle Atlantic, and the Pacific States. This was particularly true in New England where more than 6 percent of the total value of products reported by poultry as major-source group came from 10 farms with products valued at \$100,000 and over per farm.

OTHER LIVESTOCK PRODUCTS AS MAJOR SOURCE

The 20,251 farms reporting other livestock products as the major source of income included sheep and goat ranches, on which the value of wool, mohair, and goat milk sold exceeded

FARM CHARACTERISTICS BY VALUE OF PRODUCTS

55

the value of the animals sold; commercial fur farms; apiaries; and the like and were rather evenly scattered throughout the value-of-products groups. About one-half of these farms were located in the Mountain and the West South Central States, where a large number of sheep and goats are raised; the sale of wool and mohair was responsible for the placement of these farms in this major-source group.

The greatest concentration in total value of products was noted in the East North Central Division where 9 farms in the \$100,000 and over value group produced 26 percent of the gross value of products reported by the 3,190 farms with "other live-stock products" as the major source of income. Fur animals raised in captivity and wool are important sources of income in this major-source group for the East North Central Division.

FIELD CROPS AS MAJOR SOURCE

The number of farms reporting field crops as the major source of income exceeded the number of any other single major-source group. The field crop group, which included 37 percent of the farms in the United States, supplied 83 percent of the field crops sold or traded by all farms. Most of the farms with field crops as the major source of income had a small- or a medium-value of products; approximately 37 percent had a total value of products of less than \$600, while only 2 percent reported products valued at \$6,000 and over. However, almost 12 percent of the total value of products reported by the farms in the \$10,000 and over value group with field crops as the major source of income came from 166 farms with \$100,000 and over value of products.

Nearly two-thirds of the 2,186,086 farms in this major-source group were in the southern divisions. The concentration of field crop farms in these States may be attributed largely to the production and sale of cotton by a large number of operators living on small farms or sharecropper units, who produce few other agricultural products. In the West South Central and the South Atlantic States farms with field crops as the major source were most numerous and constituted 52 and 18 percent, respectively, of all classified farms. In the East South Central Division, field crop farms, 44 percent of the total, were second to farms with products used by the farm household as the major source of income, which were 48 percent of all farms. Although cotton was the chief crop sold by the farm operators in these southern States, tobacco, peanuts, and potatoes contributed a significant amount to the total value of products.

The East and the West North Central States, which include the area referred to as the Corn Belt, also had a large number of farms with field crops as the major source of income. The proportion of all farms in this major-source group in these States was less than for the southern States, being 21 percent for the East North Central and 34 percent for the West North Central States.

Farms with field crops as the major source of income did not constitute as large a proportion of the farms in the Pacific, the Middle Atlantic, or the New England Divisions as in other areas. The higher-value groups in these three divisions included a larger proportion of farms with field crops as the major source of income than the lower-value groups; in the other divisions the larger proportions were noted in the medium-value groups.

The Pacific Division had 100 farms with field crops as the major source of income in the \$100,000 and over value group. The West South Central and New England Divisions ranked second and third with 17 and 16 farms, respectively.

VEGETABLES AS MAJOR SOURCE

Farms with vegetables as the major source of income, 1.3 percent of all farms, were relatively more numerous in the Middle Atlantic, Pacific, and New England Divisions. The Pacific Division vegetable farms, however, attained the highest average value of products per farm. One-sixth of the total value of products from vegetable farms in the Pacific Division was reported by 43 farms in the \$100,000 and over value group.

FRUITS AND NUTS AS MAJOR SOURCE

The sale of fruits and nuts was reported as the major source of income for 2.2 percent of the classified farms in the United States. Farms with this major source of income were most frequently found in the Pacific Division which had 4 out of every 9 fruit and nut farms in the United States. This division in 1939 produced about 52 percent of the value of fruits and nuts reported on the classified farms. Only in the Pacific Division, where 22 percent of all farms had fruits and nuts as the major source of income, did the number exceed 3 percent of the classified farms. In 5 divisions less than 2 percent of the classified farms reported fruits and nuts as the major source of income. About 25 to 30 percent of the farms in the value groups \$400 to \$5,999 in the Pacific States had fruits and nuts as the major source of income. In only one other value group among all the divisions did the proportion of farms in this major-source group exceed 8 percent of the farms within a single value group.

In the South Atlantic Division 16 percent of the farms in the \$10,000 and over value group reported fruits and nuts as the major source of income; these farms in large part were located in the citrus fruit areas of Florida, the peach and pecan areas of Georgia, and the apple-growing sections of Virginia and West Virginia.

HORTICULTURAL SPECIALTY AS MAJOR SOURCE

Horticultural specialty farms were the fewest in number—18,950—and had the highest average value of products. Growing crops under glass, nursery products, vegetable seeds, bulbs, plants and flowers all take special skill, as well as considerable capital and labor. Although some operators find employment in this line without much capital or hired labor, as was indicated by the appearance of figures in practically all value groups, the largest single group, 16 percent of the total, was the \$10,000 and over value group which produced 70 percent of the total value of products reported by this major-source group.

FOREST PRODUCTS AS MAJOR SOURCE

Farms with forest products as the major source of income were only a fraction of 1 percent of the farms in every division, except New England where this group accounted for 3 percent of all the farms. The sale and use of maple syrup and sugar by the farm operators help explain the importance of forest products in this division. The average value of products from these farms was small. In every section with woodland, some farm operators may cut off enough wood to establish forest products as the major source of income for the year. Few properties classed as farms, however, had woodlands extensive enough for operation on the "sustained yield" basis or annual crop of forest products. The entire group of farms with forest products as the major source of income sold 40 percent of all forest products sold by farm operators.

CENSUS OF AGRICULTURE: 1940

PRODUCTS USED BY FARM HOUSEHOLD AS MAJOR SOURCE

The caption "subsistence farms" included all farms on which the value of products used by the farm household exceeded the value of products reported for any of the other 9 major sources of income. Almost one-third of the classified farms were included under this caption, the percentage varying from 79 percent in the \$1 to \$99 value group to less than 1 percent in the value groups of \$2,000 and over. In the \$10,000 and over value group, 13 farms reported the products used by the farm household as the major source of income; most of these farms were large country estates or farms following a diversified plan of farming and supplying food to several families living on the farm. Two-thirds of the farms in this major-source group reported less than \$400 value of products; these farms accounted for almost two-thirds of all farms in the value groups under

\$400. Some of the farms in the lower-value groups were the rural residences of persons working at other occupations, the homes of individuals living in semiretirement, or the homes of part-time farmers, but for many individuals these farms supplied their total gross income.

Farms with products used by the farm household as the major source of income included almost one-half of the classified farms in the East South Central States, but only one-fifth of those in the West North Central States. The 3 southern divisions—East South Central, South Atlantic, and West South Central—reported almost two-thirds of all farms in this major-source group. About two-thirds of the farms with farm products used by the farm household as the major source in these 3 divisions had less than \$400 value of products; almost seven-eighths had less than \$600 value of products.

¹Value of farm products sold, traded, or used by farm households. Since, for the sample farms, no tabulation of value of products was made by major-source groups, it was not possible to harmonize the adjusted figures for number of farms, cross-classified by value of products and by major source of income, with the totals for value of products by major-source groups, as published in ch. X of vol. III, General Report on Agriculture.

²Includes farms with usable reports for value of farm products sold, traded, or used by farm households; but excludes 38,502 farms with no farm products sold, traded, or used by farm households, and also, 39,542 unclassified farms.

FARM CHARACTERISTICS BY VALUE OF PRODUCTS

59

TOTAL VALUE OF FARM PRODUCTS,¹ 1939; FOR THE UNITED STATES AND DIVISIONS

Farms, expanded and adjusted to agree with the recorded totals. See text discussion regarding the complete tabulations for the "\$10,000 and over" value group.
[Farms by major source groups and value subgroups of "\$10,000 and over," see tables 2, 3, and 4.]

PERCENT DISTRIBUTION OF FARMS IN EACH VALUE GROUP BY MAJOR SOURCE OF INCOME

¹Value of farm products sold, traded, or used by farm households. Since, for the sample farms, no tabulation of value of products was made by major-source groups, it was not possible to harmonize the adjusted figures for number of farms, cross-classified by value of products and by major source of income, with the totals for value of products by major-source groups, as published in ch. X of vol. III, General Report on Agriculture.

²Includes farms with usable reports for value of farm products sold, traded, or used by farm households; but excludes 88,503 farms with no farm products sold, traded, or used by farm households, and also, 39,542 unclassified farms.

FARM CHARACTERISTICS BY VALUE OF PRODUCTS

61

VALUE OF FARM PRODUCTS,¹ 1939; FOR THE UNITED STATES AND DIVISIONS—Continued

Farms, expanded and adjusted to agree with the recorded totals. See text discussion regarding the complete tabulations for the "\$10,000 and over" value group of farm products by major source groups and value subgroups of "\$10,000 and over," see tables 2, 3, and 4.]

PERCENT DISTRIBUTION OF FARMS IN EACH VALUE GROUP BY MAJOR SOURCE OF INCOME

All classified farms ^b	Farms with major source of income from livestock and livestock products					Farms with major source of income from crops and forest products					Farms with farm products used by farm households as major source (subsistence farms)	
	Total	Livestock farms	Dairy farms	Poultry farms	Other livestock products farms	Total	Field crop farms	Vegetable farms	Fruit and nut farms	Horticul- tural specialty farms

¹Value of farm products sold, traded, or used by farm households. Since, for the sample farms, no tabulation of value of products was made by major-source groups, it was not possible to harmonize the adjusted figures for number of farms, cross-classified by value of products and by major source of income, with the totals for value of products by major-source groups, as published in ch. X of vol. III, General Report on Agriculture.

²Includes farms with usable reports for value of farm products sold, traded, or used by farm households; but excludes 88,062 farms with no farm products sold, traded, or used by farm households, and also, 38,542 unclassified farms.

FARM CHARACTERISTICS BY VALUE OF PRODUCTS

63

VALUE OF FARM PRODUCTS,¹ 1939; FOR THE UNITED STATES AND DIVISIONS—Continued

Farms expanded and adjusted to agree with the recorded totals. See text discussion regarding the complete tabulations for the "\$10,000 and over" value group.
[Farms by major-source groups and value subgroups of "\$10,000 and over," see tables 2, 3, and 4.]

PERCENT DISTRIBUTION OF FARMS IN EACH VALUE GROUP BY MAJOR SOURCE OF INCOME

FARM CHARACTERISTICS BY VALUE OF PRODUCTS

65

NUMBER OF FARMS AND TOTAL VALUE OF FARM PRODUCTS, CROSS-CLASSIFIED BY MAJOR SOURCE OF PRODUCTS,¹ BY DIVISIONS

For the cross-classification of number of farms by major source of income and by value groups of less than \$10,000, based upon a 2-percent sample, see table 1.]

FARMS WITH MAJOR SOURCE OF INCOME FROM CROPS AND FOREST PRODUCTS												FARMS WITH FARM PRODUCTS USED BY FARM HOUSEHOLDS AS MAJOR SOURCE OF INCOME	
Total		Field crop farms		Vegetable farms		Fruit and nut farms		Horticultural specialty farms		Forest products farms			
Number of farms	Value of products (dollars)	Number of farms	Value of products (dollars)	Number of farms	Value of products (dollars)	Number of farms	Value of products (dollars)	Number of farms	Value of products (dollars)	Number of farms	Value of products (dollars)	Number of farms	Value of products (dollars)

Workstock and Other Livestock

Specified Farm Machinery and Facilities

Business With or Through Cooperatives

WORKSTOCK AND OTHER LIVESTOCK

In addition to presenting previously unpublished tabulations of the livestock data contained in chapter VII, volume III, *General Report on Agriculture*, this chapter furnishes four entirely new counts that had not been made previously. They include the following: (1) farms reporting horses and/or mules and tractors, (2) farms reporting horses and/or mules but no tractors, (3) farms reporting tractors without horses or mules, and (4) farms reporting horses, mules, cattle, and/or hogs. The first three tabulations furnish a much better picture of the distribution of horse and mechanical power on farms than has been available. The fourth tabulation is intended to indicate the proportion of farms having livestock other than poultry, and its data are comparable to those presented in table 13, chapter VII, volume III, *General Report on Agriculture*, except for the inclusion of sheep in table 13.

FARMS REPORTING HORSES, MULES, CATTLE, AND/OR HOGS

Nine-tenths of the classified farms in the United States reported one or more of these classes of livestock—horses, mules, cattle, and/or hogs. The Pacific Division had the lowest proportion reporting, 70 percent; and the West South Central Division the highest, 94 percent. In all divisions, the two lowest-value-of-products groups, below \$250, had a considerably lower proportion of farms reporting these items than the average for their division. In three divisions the proportion of farms reporting these classes of livestock in the highest-value-of-products group was somewhat lower than the division average. A low proportion of farms reporting livestock indicates the presence of types of farms on which livestock frequently are not found, such as specialized poultry, fruit, truck and cash-grain farms, and retirement and residence units.

One-tenth of all farms do not report any horses, mules, cattle, and/or hogs and one-fourth of these farms without livestock have less than \$100 value of products. More than three-fifths of the farms not reporting any of these classes of livestock had less than \$400 value of products, but no value group had less than 4 percent of its farms in this category.

The difference between the count of farms reporting horses, mules, cattle, sheep, and/or hogs, and the number reporting these classes, except sheep, can be taken to represent the number of farms having sheep but none of the other specified classes of livestock. There are approximately 10,000 such farms, half of which are in the 2 North Central Divisions and more than a fourth in the Mountain and Pacific Divisions.

WORKSTOCK AND TRACTORS

Almost one-fourth of all farms in the United States reported neither horses, mules, nor tractors. For the lowest-value-of-products group this proportion was two-thirds; for the value group from \$100 to \$249, nearly half were without workstock or tractors. For the value-of-products groups of \$1,000 and

over, the proportion without these types of power was less than 10 percent. For all divisions except the Mountain Division, less than half the farms in the lowest-value-of-products group reported animal or tractor power. In the New England and Pacific Divisions less than half the farms in the four value-of-products groups under \$600 reported workstock or tractors. These four groups constitute 46 percent of all classified farms in the New England Division and 40 percent of all classified farms in the Pacific Division.

Geographic divisions and value-of-products groups which were high in the proportion of farms without workstock or tractors were also high in the proportion of farms without livestock.

Of all farms in the United States 53 percent reported horses or mules but no tractors, 4.5 percent reported tractors but no horses or mules, and 19 percent reported both. Less than 1 percent of the farms in the East South Central and South Atlantic Divisions reported tractors without workstock and about two-thirds of the farms in the three Southern Divisions used only horses or mules.

The proportion of farms reporting tractors and the proportion reporting both tractors and workstock are larger for the higher-value-of-products groups. In general, this is true for all geographic divisions. Only about one-fourth of the farms reporting tractors are in the value-of-products groups below \$1,000 but these groups contain two-thirds of all the farms in the United States.

CATTLE

The proportion of farms reporting cattle on April 1, 1940 varies from 60 percent in the Pacific Division to 89 percent in the West North Central Division. The proportion of farms reporting cattle tends to be somewhat higher in the middle-value-of-products groups. With a very few exceptions the proportion of farms in any geographic division reporting cattle was less than half in the value-of-products group of less than \$100, and over half in all other value groups. In all divisions except New England and the Pacific more than two-thirds of the farms in all value-of-products groups over \$250 reported cattle.

COWS MILKED

About three-fourths of the farms in the United States reported cows milked during some part of 1939, but approximately one-half of these milked only 1 or 2 cows. The proportion of farms with cows milked varies from 57 percent in the Pacific Division to 86 percent in the West North Central. The proportion of farmers milking cows tends to become larger with an increase in the value-of-products groups up to the medium-value groups, and to diminish somewhat for groups above that level. This general pattern applies to all geographic divisions except the Pacific, in which the proportion of farms reporting cows milked in 1939 is about the same for the largest-value-of-products groups as for those in the medium-value brackets.

CENSUS OF AGRICULTURE: 1940

More than half the farms in all value-of-products groups over \$100—except for the \$100 to \$249 groups in the New England and Mountain Divisions—reported cows milked. Over two-thirds of the farms in groups above \$250 except in the New England, Mountain, and Pacific Divisions reported cows milked. Distribution of farms milking at least one cow is therefore very general throughout the geographic divisions and value groups.

In the lower-value-of-products groups, however, most of the farms report only 1 or 2 cows milked. For the groups below \$400, 83 percent of the farms with cows milked reported 1 or 2 cows. For the groups with \$400 to \$999 value of products, 55 percent of the farms that reported cows milked were milking 1 or 2 cows and for all farms in the groups above \$1,000 those milking 1 or 2 cows were only 26 percent of the farms reporting cows milked.

HOGS

Fewer farms reported hogs in 1940 than reported cows milked in 1939. About three-fifths (62 percent) of all farms reported hogs on hand April 1, 1940. The number of farms having hogs at some time during 1939 was larger than the number reporting hogs on April 1, 1940, since 67 percent of all farms reported the butchering of hogs or pigs in 1939 (table 38, ch. VII, vol. III—*General Report on Agriculture*). Some farmers who raise hogs do no butchering, therefore the proportion of farms raising or butchering hogs must have been somewhat over 67 percent. Variations in the proportion of farms reporting hogs in the different divisions are marked; between 64 and 70 percent of the farms in the 2 North Central and the 3 Southern Divisions reported hogs, but in New England only 18 percent reported. The proportion of farms reporting hogs and reporting sows in the different value-of-products groups follows the same pattern as for cows milked, increasing toward the middle of the value groups and decreasing in the higher brackets.

For the United States as a whole, more than half the farms in each value-of-products group above \$250 reported hogs. In the New England and Pacific Divisions, no value-of-products group had hogs on as many as one-third of the farms. In the three Southern Divisions only the value-of-products group below \$100 had hogs on less than half the farms.

One-third of all farms in the United States reported sows and all value-of-products groups except the two groups below \$250 reported sows on at least 20 percent of the farms. Less than one-third of the farms in all groups up to \$750 reported sows. The proportion of farms reporting hogs which have sows is much greater in the higher-value brackets. For the groups below \$400 value of products, 34 percent of the farms with hogs, reported sows. For the groups from \$400 to \$999 the proportion was 47 percent; it was 68 percent for the groups from \$1,000 to \$2,499, and 75 percent for the groups above \$2,500.

Most of the farms with sows in the lower-value groups reported having only 1 or 2 sows. Of the farms with sows in the groups with less than \$400 value of products 85 percent had 1 or 2 sows. In the groups from \$400 to \$999 the proportion was 72 percent. For the groups from \$1,000 to \$2,499 and \$2,500 and over, the percentages were 44 and 23, respectively.

SPECIFIED FARM MACHINERY AND FACILITIES

All of the items contained in this tabulation are available by States and divisions in chapter VI, volume III—*General Report on Agriculture*.

AUTOMOBILES, MOTORTRUCKS, AND TRACTORS

Almost 3 out of 5 farm operators in the United States reported automobiles in 1940; less than one-fourth reported tractors

and about one-sixth reported motortrucks. There is considerable variation in the proportion of farms having these items in the different geographic divisions. The proportion having automobiles varies from 82 to 26 percent, the proportion reporting motortrucks from 32 to 7 percent, and tractors from 48 to 4 percent.

The East North Central and West North Central Divisions were highest in the proportion of farms reporting automobiles and tractors, but were fifth and sixth, respectively, in the proportion reporting motortrucks. The New England Division was first in the proportion of farms reporting motortrucks, and sixth in the proportion reporting automobiles and tractors. The three Southern Divisions were lowest for all three items.

In all divisions, more farmers reported automobiles than either motortrucks or tractors. In 5 divisions more farms had motortrucks than tractors.

The proportion of farms reporting these items of equipment was greater in the upper-value-of-products groups. This tendency was much more pronounced for motortrucks and tractors than for automobiles.

Two-fifths of the farms in the United States, in value-of-products groups under \$600, reported automobiles in 1940. More than four-fifths of the farms in value groups over \$1,000 reported automobiles. In the Middle Atlantic, East North Central, and Pacific Divisions, the proportion of farms having automobiles was more than 50 percent in all value groups. In the New England and West North Central States there were automobiles on more than half the farms for all value groups above \$100. In the South Atlantic and East South Central Divisions less than half the farms in all value groups below \$1,000 reported automobiles. In the West South Central Division this was true for groups below \$750, and in the Mountain Division for the two groups below \$250.

In all geographic divisions, less than 15 percent of the farms in the two lowest-value groups reported motortrucks and tractors. In the South Atlantic and East South Central Divisions, less than 10 percent of the farms reported motortrucks and 6 percent or less reported tractors in all value groups below \$1,000.

ELECTRIC DISTRIBUTION LINES AND DWELLINGS LIGHTED BY ELECTRICITY

Of all farms in the United States 46 percent reported that they were within one-quarter mile of an electric distribution line in 1940, and one-third of the farms reported dwellings lighted by electricity. A greater proportion of farms is served by electricity in the New England, Middle Atlantic, East North Central, and Pacific Divisions than in the others. A much greater proportion of farms with high value of products is served by electricity than of the lower-value groups, and a greater proportion of the higher-value groups is within one-quarter mile of a distribution line. In the lower-value groups the farms reporting dwellings lighted by electricity are only 60 to 70 percent of the farms within one-quarter mile of an electric distribution line. In the Southern Divisions this proportion is generally less than 50 percent. In the higher-value groups a much larger proportion of the farms within one-quarter mile of a distribution line has dwellings lighted by electricity. In some divisions, the upper 2 or 3 value groups report more farms with dwellings lighted by electricity than are within one-quarter mile of a distribution line. This may be due to the use of individual generating plants.

TELEPHONES

Only one-fourth of all farms in the United States reported telephones in 1940. About 10 percent of the farms in the 3

FARM CHARACTERISTICS BY VALUE OF PRODUCTS

81

Southern Divisions reported telephones compared with 50 percent in New England. The proportion of farms having telephones varies with the value of farm products per farm, the proportion being about five times as great in the highest group as in the lowest, for the country as a whole. The proportion of farms having telephones in the low-value groups is higher in the New England, Pacific, and the two North Central Divisions than in the other divisions.

BUSINESS WITH OR THROUGH COOPERATIVES

Between 20 and 40 percent of the farm operators in the New England, Middle Atlantic, Mountain, Pacific, and the two North

Central Divisions reported business with or through cooperatives in 1939, compared with about 10 percent in the 3 Southern Divisions.

As a rule, the proportion dealing with cooperatives tends to become larger in the higher-value groups. The proportion of farms in the lowest-value-of-products groups doing business with cooperatives is quite low in all divisions, for most divisions being less than 10 percent for the value groups below \$250. For the 3 Southern Divisions, only 25,835 farms out of 664,790 with products valued at less than \$250, reported business with cooperatives.

CENSUS OF AGRICULTURE: 1940

TABLE 1.—FARMS REPORTING SPECIFIED CLASSES OF POWER AND SPECIFIED CLASSES OF LIVESTOCK, 1940,
CLASSIFIED BY TOTAL VALUE OF FARM PRODUCTS,¹ 1939; FOR THE UNITED STATES AND DIVISIONS
[Bold face figures are the 1940 Census recorded totals for all farms; all other entries are based upon a 2-percent sample of the reports for the individual farms, expanded and adjusted to agree with the recorded totals. See text. Horses, mules, and cattle over 3 mo. old and hogs over 4 mo. old, Apr. 1, 1940.]

CENSUS OF AGRICULTURE: 1940

TABLE 1.—FARMS REPORTING SPECIFIED CLASSES OF POWER AND SPECIFIED CLASSES OF LIVESTOCK, 1940,
CLASSIFIED BY TOTAL VALUE OF FARM PRODUCTS,¹ 1939; FOR THE UNITED STATES AND DIVISIONS—Con.

[Bold face figures are the 1940 Census recorded totals for all farms; all other entries are based upon a 2-percent sample of the reports for the individual farms, expanded and adjusted to agree with the recorded totals. See text. Horses, mules, and cattle over 3 mo. old and hogs over 4 mo. old, Apr. 1, 1940.]

DIVISION AND VALUE GROUP	HORSES (OR MULES) AND TRACTORS								HORSES, MULES, CATTLE AND/OR HOGS				HORSES AND/OR MULES (Farms reporting)	
	Farms reporting								Farms not reporting		Farms reporting			
	Horses and/or mules with no tractors reported		Horses and/or mules with tractors		Tractors with no horses or mules reported		horses, mules, or tractors		Farms reporting		Farms not reporting
